

Netintelligence Web Filter

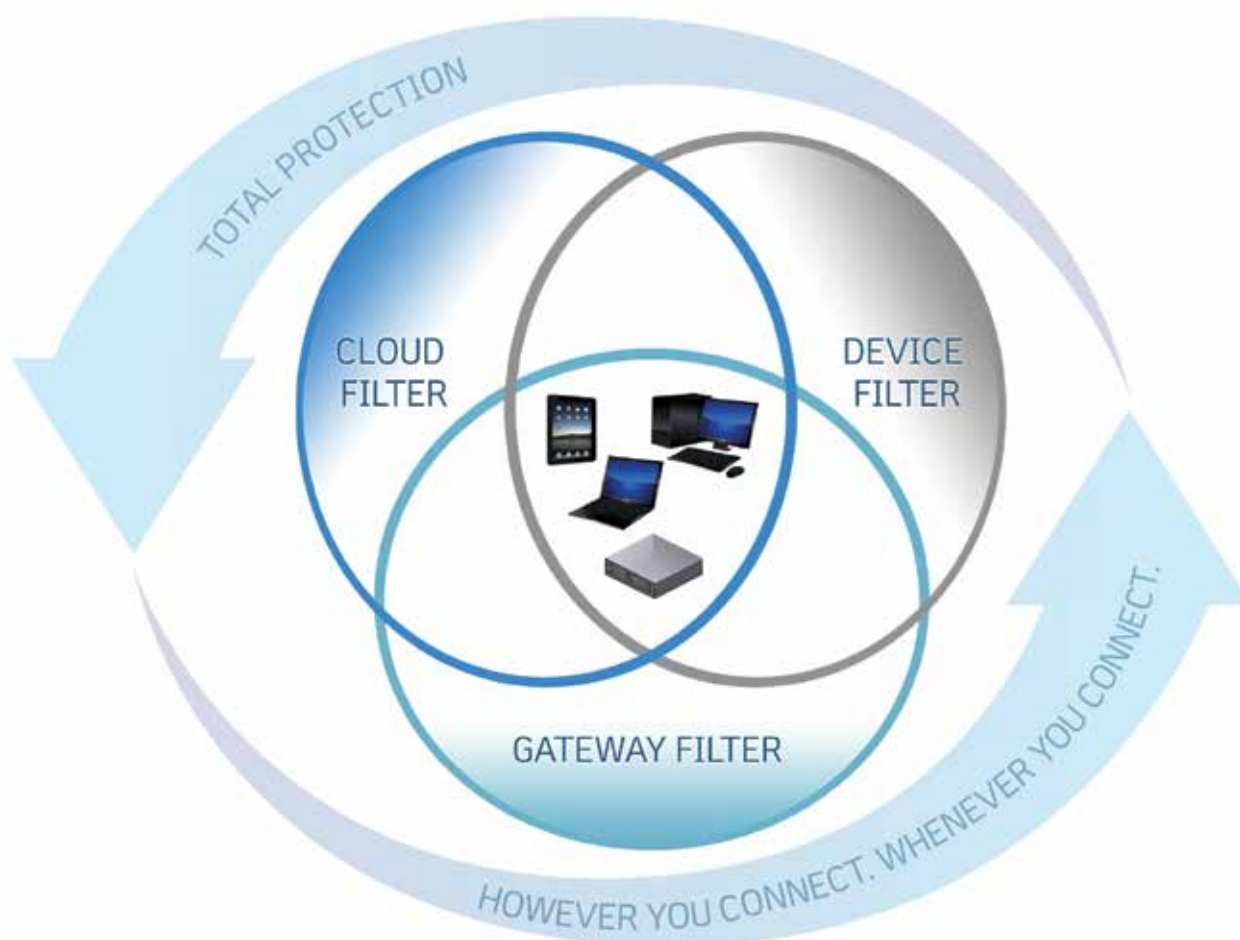

Netintelligence Web Filter

Total Web Protection regardless of how or where you connect

Netintelligence Web Filter is the award winning web security brand from iomartcloud. As connectivity and mobile applications evolve, so must filtering technologies to ensure that they can cope with the increasing sophistication of devices and the threats targeting those devices. Simple gateway solutions are too inflexible to cope with the demands of mobile users and new internet aware devices. The Netintelligence Web Filter service allows for the deployment of a range of technologies that can be optimized to deliver the level of protection required, without compromising the business or user experience. The solution provides flexible and scalable Web Filtering, including Malware and Spyware protection, to all users regardless of the diversity of the network environment.

Netintelligence delivers three distinct technologies that can be combined or layered to suit different circumstances and all the policies and reports can be managed from one centrally web accessed interface.

Proven Capability

Netintelligence Web Filter from iomartcloud is the first content management system to have been awarded the British Standards Institution (BSi) Kitemark for Child Safety Online (PAS 74:2008 Internet Safety).

Netintelligence Cloud Filter

The Cloud Filter service is simple to deploy and simple to use. Set up policies and point Web traffic at the service and the filtering is in place. As many gateways or devices as required can be setup and authentication is simple using our authentication service, which can be easily interfaced with an organization's directory servers.

Netintelligence Gateway Filter

The Gateway Filter can be installed as a virtual appliance or a physical server. It's simple to install, simple to manage and can be installed in combination with other gateway devices or in conjunction with the Cloud Filter to provide high availability.

Netintelligence Device Filters

The Netintelligence Device Filter allows mobile users to be easily protected. The service enforces Web policies regardless of location or connectivity and is ideal for laptops, desktops or iPads, where filtering on a gateway can't be guaranteed.

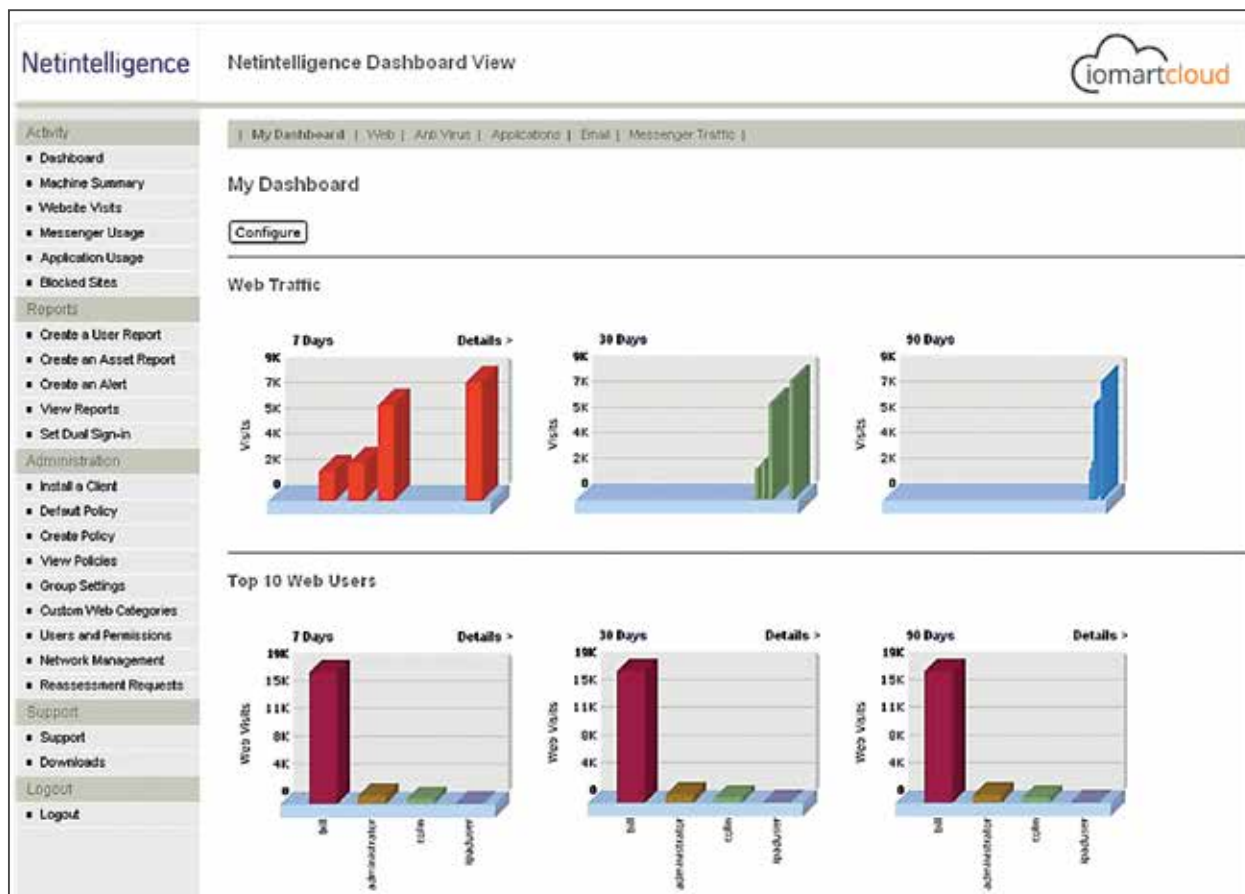

The iPad filter allows tablet users to be easily managed by central policies in the same way as users on other devices or gateways, providing management and reporting through the central control panel.

Netintelligence Web Filter Control Panel

The central Control Panel allows management of the Cloud, Gateway and Device solutions from one simple Web interface. Policies can be as simple or as complex as required. Users or Devices can be grouped and layered policies applied, which will be enforced regardless of the technologies deployed.

Reporting is simple; a comprehensive set of reports allows the easy creation of network overviews or the option to drill down into more detailed views. These reports can either be generated on demand or scheduled as required.

Features		Benefits
<ul style="list-style-type: none"> • Cloud Service • Gateway Service • Device Service • Layer and combine 	<ul style="list-style-type: none"> • Centrally Managed • Central Reporting • Simple Deployment • Scalable 	<ul style="list-style-type: none"> • Protects all users regardless of location • One price regardless of configuration • Simple to configure, simple to change • Provisional on demand • Manage from any location • Devolved management

About iomartcloud
